

M501: MEASUREMENT OF HAZARDOUS SUBSTANCES INCLUDING RISK ASSESSMENT

CASE STUDY 2: SUPPLEMENTARY INFORMATION FOR COURSE PRESENTER

The intent is to demonstrate that very high concentrations of toxic gases may be present in what appears to be an otherwise normal work situation.

The exercise is best conducted by setting the scene in the form of a scenario (which happens to be true) and then discussing with the group what actions they would take and what actions actually were taken.

Refer to the PowerPoint file *“Case Study 2 – Supplementary Information for Lecturer”* for details of each overhead in the notes pages.
